

Connection to Image Unit EEPROM

EEPROM-Typ: 24C02

Pin 1 and 6 are on the EEPROM board only bridged (no connection to the EEPROM) . The circuit is otherwise identical to the toner cartridges boards . Because of lack of appropriate connector for reading strands were soldered . The Image Units Phaser 6125 and 6130 can be interchanged !

Data = SDA
Clock = SCL
+3.3VDC = VCC
SG = Ground
